## Solution Manual for Scientific Computing

The solution to a (nondegenerate) linear programming problem must occur at a vertex of the feasible set. In our unperturbed problem there are three vertices:  $[0,1]$ ,  $[1,0]$ , and  $[0,0]$ . Since the gradient of  $c^T x$  is almost parallel to the constraint  $Ax \leq b$ , we sometimes find the solution at the first vertex and sometimes at the second.
